## **TechCentrics, Inc. of Alexandria VA Announces Returning Founder** *Former Deputy Assistant to President Trump Rejoins Company He Founded*

TechCentrics, Inc., a technology consulting firm based in Alexandria VA announced that one of the founding members, Chris Herndon, has rejoined TechCentrics after almost two years in the Trump Administration.

As Director of White House IT, Herndon oversaw the massive information technology portfolio of more than 8000 users across the Executive Office of President. He succeeded the first D/WHIT, David Recordon from Facebook at the change of administration in January 2017. Herndon led the development of the first eight-year IT strategic roadmap which incorporated the best of industry and government to form a robust plan for technology investment and implementation. Of his many accomplishments there, one of the most notable was when he migrated the President off the personal cell phone to a secure device exclusively for Twitter which had amazing similarities to his efforts to successfully move President George W Bush off his personal cell phone to a secure device in 2002.

“While my time at the White House this go around was an amazing experience, it is exciting to be back in the private sector doing what I really enjoy – helping others be successful,” Herndon said.

Herndon originally co-founded TechCentrics in 2016 after the merger of North American Public Sector of Computer Sciences Corporation and SRA International where he served as Chief Technology Officer. Prior to these positions at, he held C-Level and senior IT leadership positions with some of Washington DC area’s most respected government systems integrators including MorganFranklin and SRA International.
